COMOR-M-319

Tab C

North Korea Targets

Ideal priority coverage which represents joint EUSA/USFK requirements follows:

- a. West coast of North Korea on line 20 nm inland from Yalu south to DMZ and then east to the coast maintaining 20 nm distance from DMZ. Attempt to get coverage of the Pyongyang area from west of the SAM sites.
- b. East coast. Northward from DMZ 20 nm inland as far as operationally permissible.
- c. Suggest return along axis of Yalu if feasible, with flight line 20 nm south of river. This would be a bonus, resulting in a 40-mile swath. This will provide coverage of practically all operational airfields as well as EUSA high priority targets.
- d. If relative priorities must be established, we would put DMZ coverage and that in c below the others but we would like it all. Also anxious to stress joint aspect of this requirement. J2 most anxious on subject air order of battle due to suspicion of introduction of new supersonic aircraft and certain redeployment within North Korea.
